How to Setup MSCwireless on Windows Vista Machines

1) Make sure the wireless adapter drivers are up to date.
2) Right-click on the network icon in the system tray and click “Network and Sharing Center.”
3) Click on “Manage Wireless Networks.”
4) Click on “Add.”

5) Choose “Manually create a network profile.”
6) Enter “MSCwireless” as the network name and “WPA2-Enterprise” as the security type. Click “Next.”

7) Choose “Change connection settings.”
8) On the “Security” tab, click the “Settings” button.

9) Uncheck “Validate server certificate” and click the “Configure” button.
10) For non-domain machines (machines not provided by MSC), uncheck this option. Click “OK.”

11) For non-domain machines (not provided by MSC), you will be prompted for your username and password. Enter your campus username (ex. Smith123) and password. The “Domain” box at the bottom can be left empty.
