PROJECT 3-

Modular Observatorium

Working with a modular unit-

PROJECT 4-

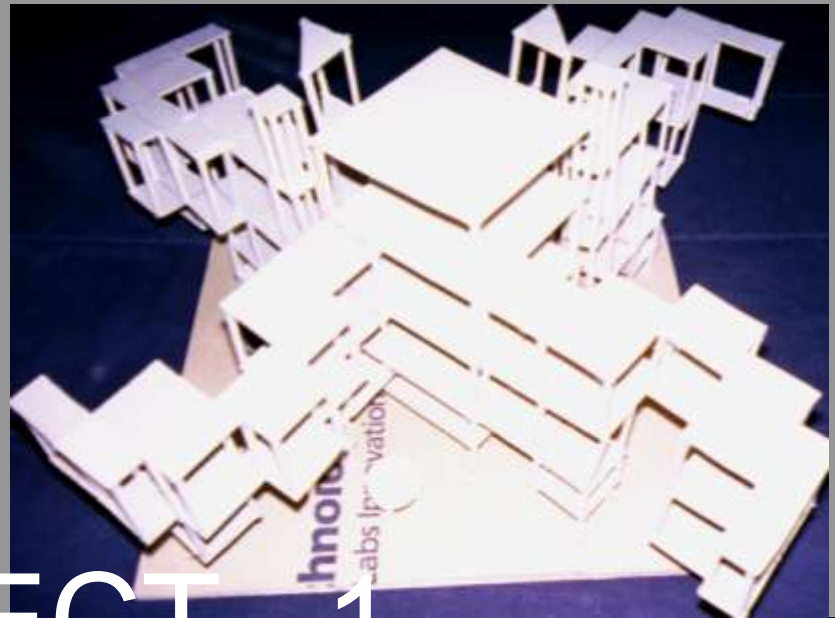

Garden Analysis

Group project .. Interpretation of an-

Italian garden-

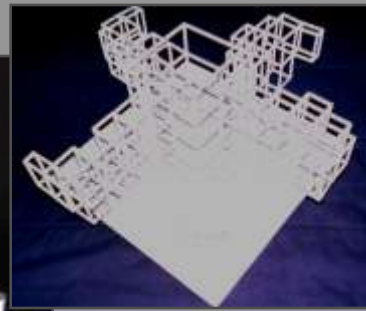

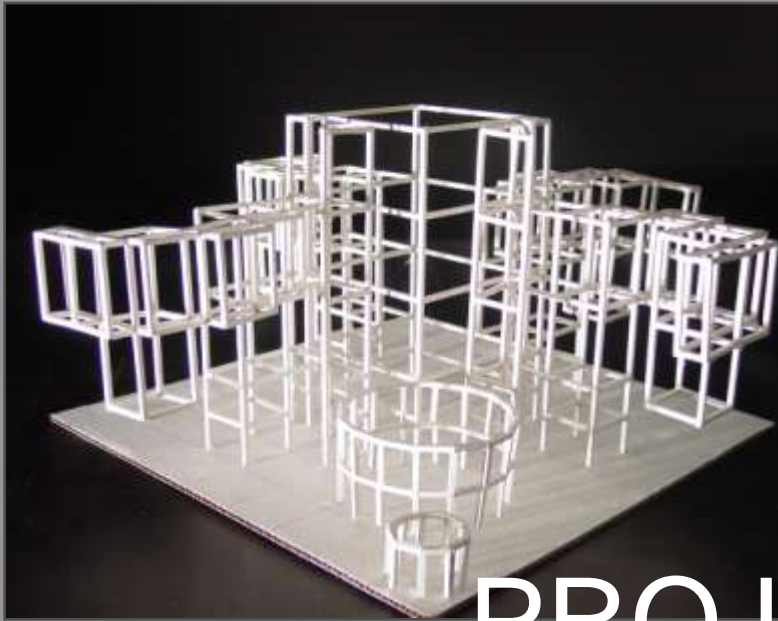

PERSONAL PROJECTS-

By using only vertical and horizontal structural members, I explored ordering, definition, and expression of spatial volumes.

PROJECT 1

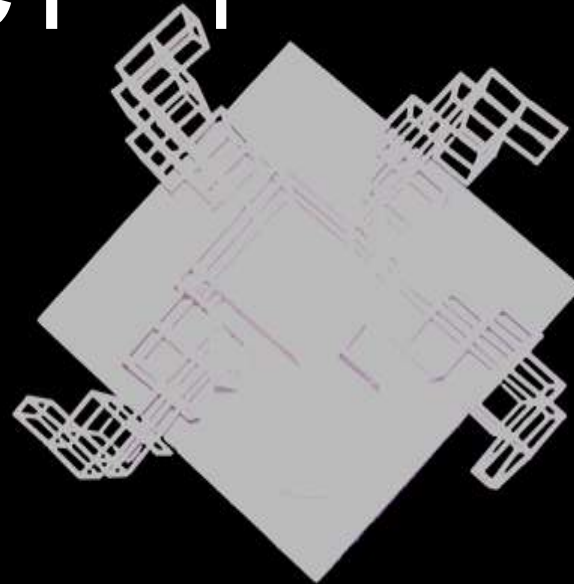

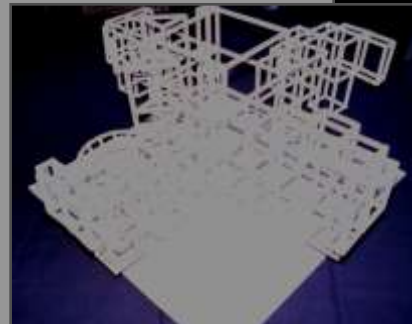

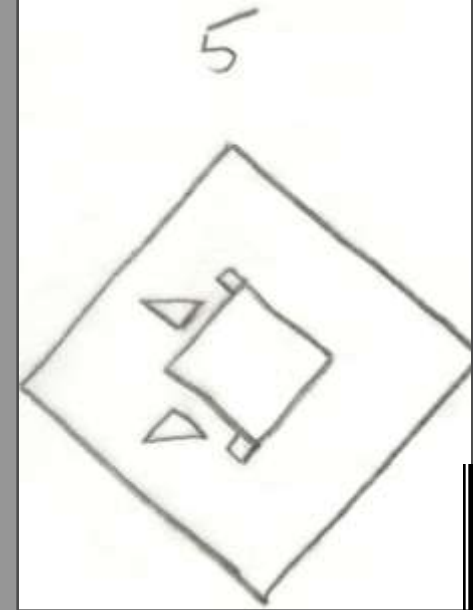

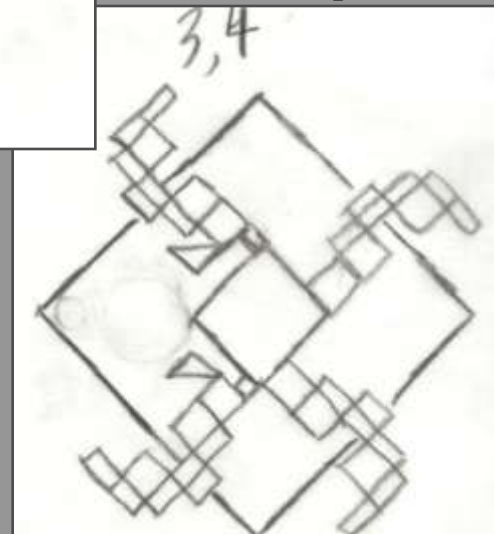

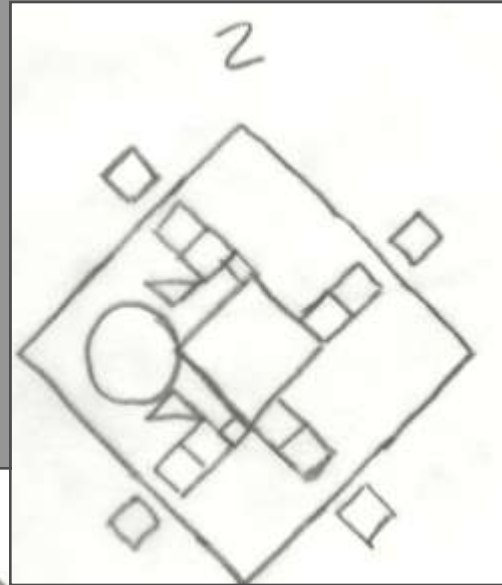

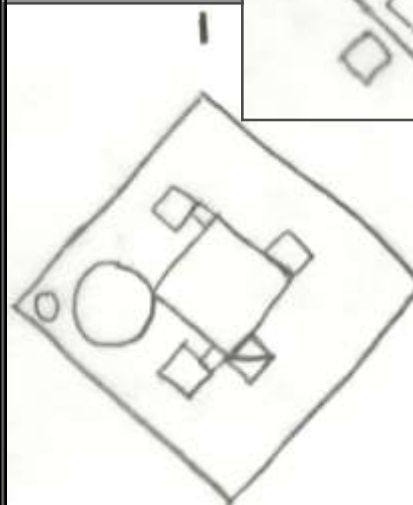

Description of project:
My usage of radial organization helped me to get my idea across to the Professor. I was visualizing a museum or something of that nature with long halls of artwork.

PROJECT 1

This project was a thought provoking exercise. I learned an incredible amount about defining space, time management and craftsmanship

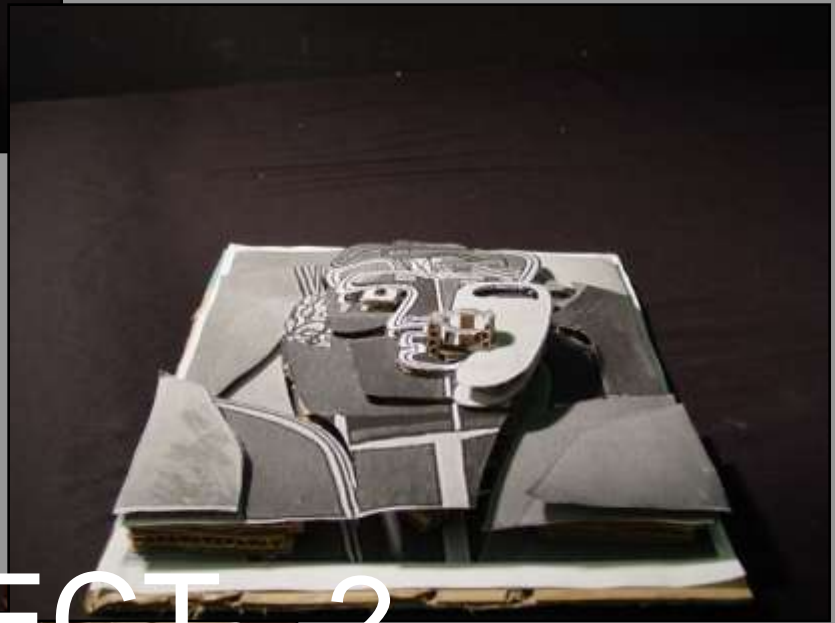

DRAWINGS

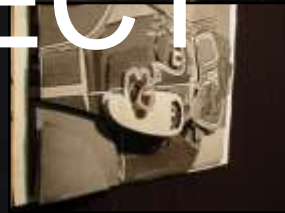

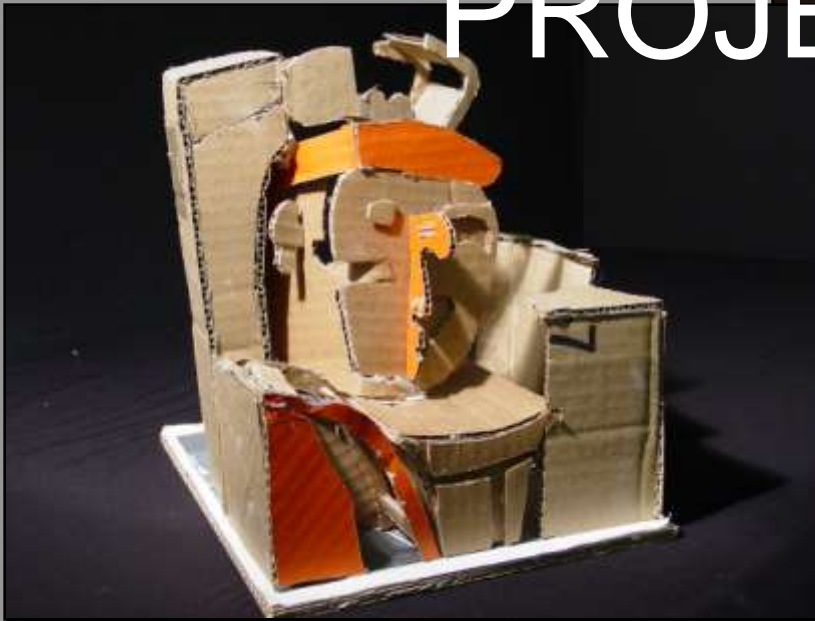

To me, each of the layers of my structure relates to the previous and next layer.

I looked at this project from the start as a painting depicting depth, height, time, and movement in a two—dimensional canvas.

PROJECT 2

My first step was in the direction of depicting layers, then I went on to adding the 4th dimension of time and movement.

**Finally I depicted the painting in
three dimensions as having
the major time movements in the X,Y
Plane and the X,Z plane**

PROJECT 2

PAINTING

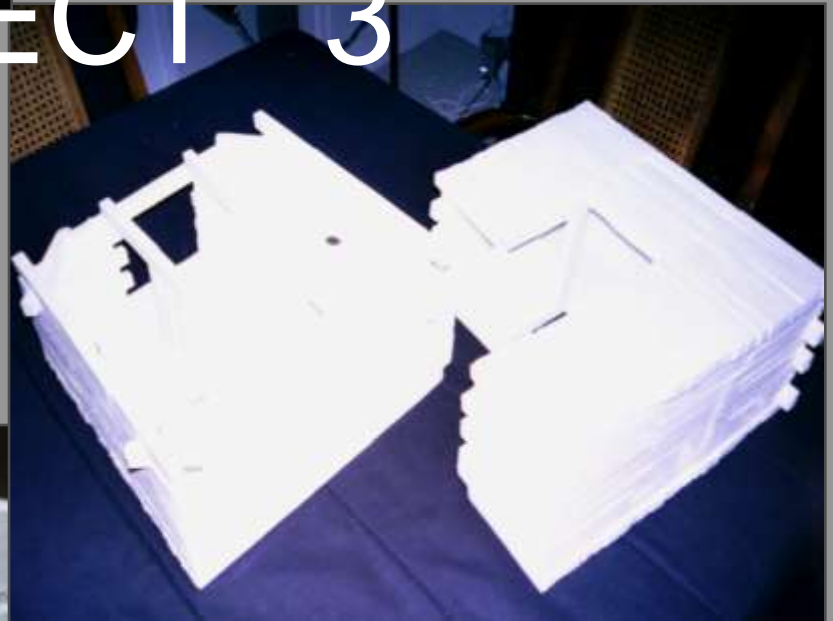

**This is the painting
that I had to analyze
It is by Le Corbusier and
is called
“Hands Crossed on Head”**

**The modular Observatorium project
was a great way to expand my
spatial/creative skills by having to work
with a modular unit.**

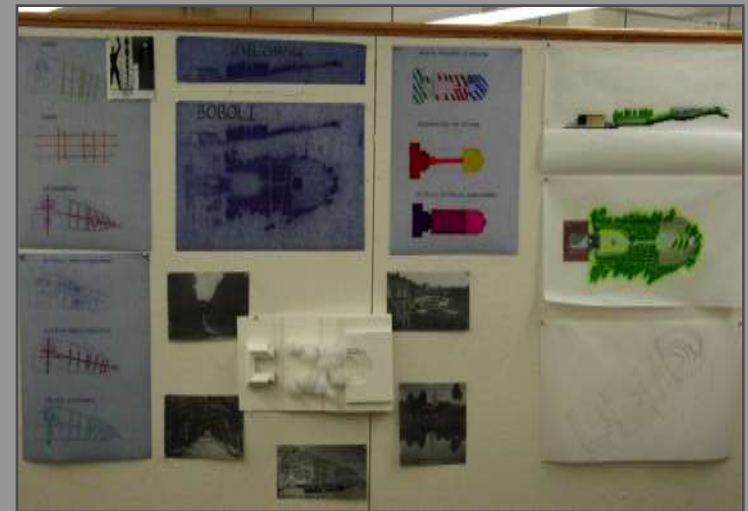

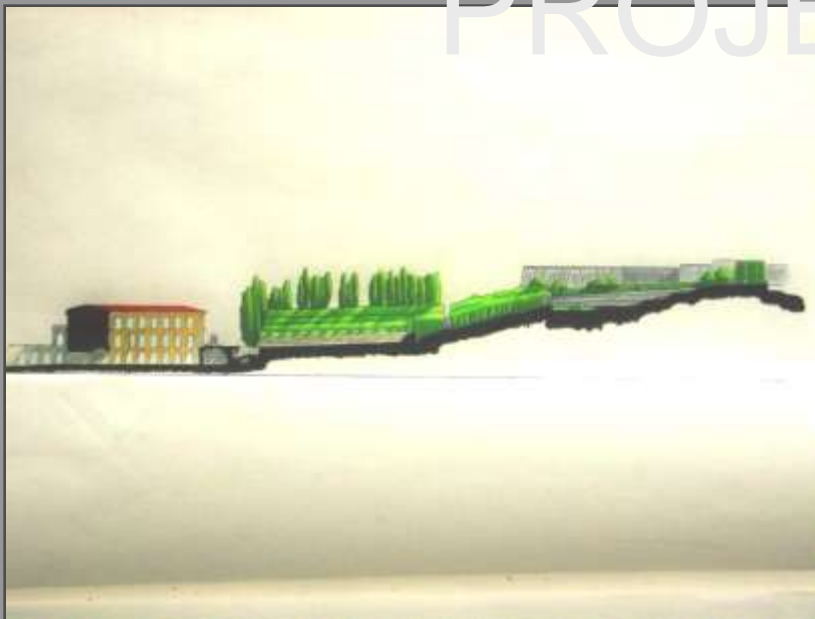

PROJECT 3

**Project 4 was a group project
We divided our group
into four parts. I rendered the plan
and section and laid out the final
presentation.**
