How to Setup MSCwireless on Windows XP Machines

1) Make sure the wireless adapter drivers are up to date.
2) Install Service Pack 3 or hotfix KB917021 for WPA2 support.
3) Right click on the wireless icon in the system tray and click “View Available Wireless Networks”.
4) Click on “Change the order of preferred networks” on the left of the window.
5) In the “Wireless Networks” tab, click the “Add” button.

7) On the “Authentication” tab, choose “Protected EAP” as the EAP type. Click on “Properties.”

8) Uncheck “Validate Server Certificate.” Click on “Configure.”
9) For CSNTPROD domain machines, leave this option checked. For non-domain machines, uncheck it. Click “OK.”

10) For non-domain machines (not provided by MSC), you will be prompted for your username and password. Enter your campus username (ex. Smith123) and password. The “Domain” box at the bottom can be left empty.
